Erledigt macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „kuckkuck“ vom 16. August 2018, 13:35

@ShadIK02 Unfortunately I haven't had any luck with MSR patching. Maybe thats also not the issue... Hmm...

@nrchandar0100 You are giving up to fast. Have you tried adding a new boot entry through shell? You can also navigate to the boot.efi through shell and just type boot.efi to boot Mojave. See if that works.

What exactly happens when you select your Mojave installation through the startvolume option of a different OS (e.g Sierra)? I always need detailed feedback in order to help you!
