kuckkuck

thanks for your help.

in boot menu there is just two boot options with the same name: mac osx, and either of them boots when set as the first priority, but both works normally when I press F12 to choose any one of them to boot.

and I tried the DarBoot.plist to my efi folder, but it still can not boot.

and in defaults the user interface is already fal.

could you please help me check my rom, thanks sincerely.
