Catalina Installation bleibt hängen

Beitrag von „theCurseOfHackintosh“ vom 14. Mai 2021, 18:24

Wer sagt sowas?! OC ist besser als Clover.

Is OpenCore unstable as it's a beta

Short Answer: No

Long Answer: No

Version 0.6.1 was originally designed to be the official release of OpenCore as it would have proper UEFI/Apple Secure Boot, and would be the 1 year anniversary of OpenCore's release as a public tool. However, due to circumstances around macOS Big Sur and the rewriting of OpenCore's prelinker to support it, it was decided to push off 1.0.0 for another year.

Quelle: Dortania Why OpenCore

Wieso integrieren die Clover devs dann selbst OpenCore?! Weil sie selbst nicht in der lage waren, das zu programmieren...
