## **Unmount Windows drive automatically during OS X boot up (or make it not mount at all)**

**Beitrag von „neoyoli“ vom 4. Februar 2015, 13:29**

For the command

Code

```
1. sudo diskutil info /Volumes/WIN 8
```

I get:

```
Usage: diskutil info[rmation] [-plist]
MountPoint|DiskIdentifier|DeviceNode|UUID
Display detailed information about a disk or partition.
Root access is not required.
```

Looks like no UUID comes up (by the way the Windows drive is not displayed in Ozmosis GUI either, if it helps).
