Erledigt **Unmount Windows drive automatically during OS X boot up (or make it not mount at all)**

Beitrag von „neoyoli" vom 6. Februar 2015, 13:39

It's specific for the drive, but it's a very easy process:

1. open Automator - New Document - choose document type as Application
2. drag the drive in the workflow window
3. in Actions on the left, go to Files and Folders-Eject Disk - drag it under the drive workflow that has been created previously
4. save it and put in the Login Items in System Preferences/Users and Groups

That's it!

One thing though, this does not eject the disk when the computer wakes from sleep, so the disk gets mounted again.
Is there any way to eject it also when waking up?
