[English] H81M-HD3 Ozmosis

Beitrag von „al6042“ vom 30. März 2015, 19:15

Hi there,

I have couple of questions in that matter,

Since your using Ozmosis on that machine, why aren't you working with the onboard sound which should be available through the DSDT which normally comes with Ozmosis mod?

Which graphics solutions was in place before you added the GT610?

How is the AirPlay setup?

What kext is used for the Realtek Gbit Lan card?

We could use a screenshot of the "system info"-app main screen and some screenshots from the internal system information, section by section,,,
