

FakeSMC in Ozmosis aktualisieren... die einfache Art...

Beitrag von „hObelware“ vom 27. April 2015, 14:26

boot into your windows installation, use google to find out how to mount an EFI partition, delete the sensors or add the corresponding FakeSMC and perform a NVRAM reset, .. (cmd-alt-p-r) ..

FakeSMC and its sensors always belong together, and they are to be seen as one package, .. so do not mix them up.
