## **Problem after install DP4 and Beta 2 on Ozmosis**

**Beitrag von „mosconi“ vom 25. Juli 2015, 10:14**

Beta 2 break kext loading.

In my case i had to install fakesmc in S L E in order to boot after update to public beta 2.

You can install the fakesmc version that you prefer forgetting the one that you have on ozmosis since it is no more loaded.

Now in my bios i have fakesmc 1290, in S L E the 1324 version and no conflict, pugins and HW monitor also works.
