Erledigt **Yosemite is not booting**

Beitrag von „norbertus" vom 4. August 2015, 20:26

Hello,
I created a bootable stick with Unibeast,
Multibeast wurde auf den Stick kopiert.

I booted from the stick (Chimera Boot Screen) and Installed Yosemite on my ssd 250GB

Postinstallation using Multibeast.
I did that on the pc maybe this was wrong.

??? Should I do that on my mac???

Because after reboot from the pcmac there stops the system by booth1
Now what to do.
Thanks in advance

🙃
