BIOS (unwiederruflich) defekt nach BIOS Update (Ozmosis Z87X-UD5H) ?

Beitrag von „nikoZ“ vom 25. August 2015, 19:17

As I know Gigabyte does not allow backup bios flashing. If you have bios switches on the motherboard it's safe to keep locked backup bios.

Try to keep power+reset for at least three reset attempts then release it. If you don't modified switch onto second BIOS it should remain untouched.
