Cant boot to my Unibeast-USB

Beitrag von „caprifx“ vom 11. September 2015, 01:23

Hey there,

i try to boot to my USB. I installed installed Yosemite on this USB with Unibeast.

But now, if i want to boot from this USB wit "-x -v" it stucks at [IOBluetoothHCIController][start] -- completed.

If i want to boot with "-f" or "PCIRootUID=0" i come to a white screen with an Apple Logo and a loading bar, but the loading bar stucks at ~25%.

Here are my pc specs:

i5 3.2 GHz

GTX 750Ti

12GB Ram

Hope for an working answer
