Sorry Folks,

you're right.

The entry in the config.plist must be:

Code

1. `<key>Defaults:7C436110-AB2A-4BBB-A880-FE41995C9F82</key>`
2. `<dict>`
3. `<key>boot-args</key>`
4. `<string>darkwake=8</string>`
5. `<key>csr-active-config</key>`
6. `<data>ZwAAAA==</data>`
7. `</dict>`

which then leads to the correct value in nvram -p
