Erledigt DSDT fix Z87MX-D3H (OZ167X)

Beitrag von „Huberer" vom 25. Februar 2016, 08:01

So, sorry again. Here is my new one with patches for EC and the rest of the necessary stuff. But keep in mind that EC is using only 15 usb ports and this board has 21 (I guess). For my testing with EC I've removed the internal boards so that I've no problems with 10.11 and USB. I don't know how it is with Ozmosis if there is a usb-port fix integrated (to use more than 15)
