Erledigt DSDT fix Z87MX-D3H (OZ167X)

Beitrag von „nikoZ" vom 25. Februar 2016, 13:53

The front USB ports are connected to the single USB 3.0 header available on the motherboard.
Even if it can't be solved the problem with EC or Wake from sleep with the USB plugged in I can live with it.
Simple, I don't leave USB plugged and I use single working frontal USB port available.
For sound I use toleda Ozmosis script which applies also to Chimera / Chameleon, it's practically a AppleHDA.kext patch.
