DSDT fix Z87MX-D3H (OZ167X)

Beitrag von „Huberer“ vom 27. Februar 2016, 12:55

Ok, I see that you already have a ssdt. So it wasn't necessary to post it here. But no problem. With my lastest dsdt sleep is not working absolutelly like the others before, right?

Edit: One last try. I've added a new dsdt. Please check if sleep and plugged in thumb drive is working.
