## **DSDT fix Z87MX-D3H (OZ167X)**

**Beitrag von „Huberer“ vom 27. Februar 2016, 13:28**

Ok thanks for the info. Look at the PN I sent you.

There's a program called sleepwatcher. With this program you can do a lot of things before and after sleep (e.g. unmount drive/mount drive again). At mac-htpc.de there's a good description but only in german.
