Hilfe fix DSDT for ASUS S551LN

Beitrag von „al6042“ vom 30. Juli 2016, 17:34

Hallo und herzlich Willkommen im Forum... 😊

Was soll denn alles in der DSDT gemacht werden?
Welche Hardware-Details gehören zu dem ASUS S551LN?
Sollt eventuell auch die NVidia Karte damit deaktiviert werden?
Welche Wifi-Karte ist eingebaut?

Würdest du bitte deine Hardware Infos in deiner Signatur oder deinem Profil, im Bereich "Über mich", eintragen?

EDIT:

We can also talk in english, if that helps... 😊

My questions above were:
What should be done with the DSDT?
What Hardware Details can be expected with your ASUS S551LN?
Should we disable the Nvidia-GPU?
What Wifi card is in your Laptop?

Please add details of your Hardware either in your signature or your profile, in the section "About me".

BTW: If we should disable the Nvidia GPU, you should also post all of your SSDT-files, since they seem to contain the relevant entries. 😊

Also create an IOREG-File with the app "[IORegistryExplorer](#)", and post that file, so we can see where the hardware is connected on the PCI-Bus.

And also add a screenshot from the app "[DPCI Manager](#)", from the following tabs: "Status" and "PCI List"
