I guess you need a DSDT-patch to rename the devices EHC1/EHC2/XHC1 to EH01/EH02/XHC and the USBInjectall.kext to get you ports running.

We have a OZM Rom for BIOS Version 2105

[MOD Für das P8Z77-m pro](#)

I just extracted the DSDT from that ROM and patched it accordingly to suit your config. Please put it into the directory /EFI/Oz/Acpi/Load on your hidden EFI-partition.
