Problem MSI Z87 G43 Gaming

Beitrag von „Cuccheis“ vom 25. August 2016, 13:29

Hello, This is not my first hackintosh but the first with ozmosis mod ..
i've got some problems while installing OS X El capitan on my configuration :
MSI Z87 G43 Gaming

i5 4670

msi Radeon r9 270x gaming 2g

16 gb corsair 1600 mhz

ssd 120 gb

I tried with the A6 version of firmware downloaded in this forum with last 167x ozmosis patch.

I created the installation usb key with terminal and every time at the boot i select OS X Installation i can see the apple for 5 seconds and after it reboot.. So I asked help to "griven" the administrator. He send me a version of E7816IMS.A60 modified with last patch for el capitan and right framebuffer for my r9 270x .. flash was ok but i got same results : can see apple logo for 5 seconds and after reboot.

I tried with and without the r9 270x plugged and got same results. I have no idea how continue to trying.. (and i don't want disturb griven 😊)

Thank you .. 😊

Andrea
