OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „wiliam.ding“ vom 27. Oktober 2016, 10:26

[Zitat von al6042](#)

To add boot-args in Ozmosis please read the following post, containing a kind of manual for Ozmosis-Settings:

[Version 1479m](#)

Where did you put the DSDT.aml?
Which directory?

I know how to add boot-args, and I've did this. But the problem is the boot-arg is no longer work in the new Os MacOS Sierra(10.12), I mean that Clover has give up this boot-arg because it won't work anymore and the use the new NvidiaWebdriver fuction to load webdriver. But Ozmosis seems didn't support NvidiaWebdriver=true.
