Well, I can only recreate the DSDT File, but I don't think it makes a big deal 🤔 but you can try if you want. I re-downlaoded the bios (this time on my PC, not Laptop) and extracted the DSDT again. Then I just threw in the DTGP Method, the AudioID1 and Basic Apple Device Renames. Then I recalled all entries that where called from TMR to TIMR back to TMR and deleted the Scope for the HDEF Device, because it mustn't be in there twice. But you can try it of course!
