Success with GA-Z77MX-D3H Sierra + Ozmosis

Beitrag von „griven“ vom 11. Januar 2017, 01:22

[@arturkin](#) thank you for your feedback glad to see it working 😊

As you mentioned I used iMAC15,1 as Systemdefinition which was not the best choice since it won't work with NVIDIA based Systems. To make things easier for future users I just uploaded a bunch of new Files especially for this Board which use iMAC14 Systemdefinitions to be more compatible with NVIDIA Graphics. As a little Bonus since there is plenty of room in the rom image I also created a version which includes AtherosL1cEthernet.kext as well as one which includes Miele AtherosE2200Ethernet.kext since there are known issues with L1c Ethernet if you transfer big amounts of Data to NAS Devices or use NAS Devices als TimeCapsule (Kernelpanic). You'll find the new files right here: [Mod für das Z77M-D3H](#)
