[v7xR1]

Dears, as first, I apologize for the English idiom... I know it's a .de but I really love this (and you of course) 🍌 📱

I want start and share with you that project as I am looking for the next-gen MacPro and because Apple didn't.... it is an alternative looking for a new Pro product from Cupertino.

Here's the component I purchased (some in delivery that week):

- **Case:** Thermaltake CORE P5 ATX Open Frame Wall Mount Mid Tower Liquid Cooling Computer Case CA-1E7-00M1WN-00

I would like to set it up with Sierra. I have a MacBook Pro 13" Late 2013, an iMac 21", macmini and all the fleet of iDevices available :P.

I would set it in the following way 3ple boot:

- macOS (primary) Sierra
- Kali Linux (secondary)
- 3th Windows 10 Professional.

How should I proceed?

Which one are the firsts step now?

Cheers
