Success with GA-Z77MX-D3H Sierra + Ozmosis

Beitrag von „Jazzman1969“ vom 15. Februar 2017, 08:39

Hi Arturkin,

as i am thinking about "ozmozing" my Hackintosh for a longer time now, i read your successful Thread here. My question is very simple:

So you just flashed your BIOS with the Ozmosis-Bios (or the altered BIOS from Griven with iMac 14.2) and that's it ? Install with Vanilla-USB-Stick (no bootloader) and no more Hacks to do ? Nothing ? Btw, which Ethernet you took in the end ? AtherosL1C or AtherosE2200 ?? Thanx for any help in advance 😊

Cheers Jazzman

Btw: Griven, if you read this: can i install Sierra with my GTX970 ? Or are there additional steps to do ?
