Update für macOS Sierra 10.12.4

Beitrag von „andreas_55“ vom 30. März 2017, 08:06

@'BamiGorengo @'al6042'

"Warning: If you want to upgrade macOS to 10.12.4 or newer with a working RX 480 setup, you need to run the OS update through Terminal instead of the App Store. This method prevents the computer from restarting during the system upgrade and allows you to perform these kext edits prior to restarting your Mac. Otherwise, you'll encounter a black screen following the traditional App Store system upgrade. Big thanks to Haggspart on Macrumors forum for this instruction. Once the update is complete (as shown below), perform steps 2-7 before restarting your Mac Pro."

Zitat aus dem Artikel, den BamiGorengo gefunden hat. Ist das nicht die Lösung für die Black Screens?
