Erledigt **Ozmosis can not load any files in the Oz directory**

Beitrag von „xlazy.xyz" vom 15. April 2017, 13:30

Hello,

I have a trouble, can not load any files in the Oz directory, kext, plist or aml. There is only one hard disk on the computer , and only GUID HFS+ file system in the disk.Oz directory is automatically created by the BIOS. The ROM is Z97XUD3H_iMac14.1_F9_Sierra2.rom.zip. How can I fix it ? Thanks !

By the way,How can I extract FFS file ? I want to put OzmosisDefaults.ffs into Oz directory .Rename it to plist and edit it?

Now everything works properly.
