10.13. High Sierra mit Ozmosis

Beitrag von „kuckkuck“ vom 9. Juni 2017, 13:14

With you hardware it may be like this atm. But take into consideration that its the 5th day of the beta so you cant expect everything to be solved yet. Right now oz is at least able to boot a drive with 10.13 installed and some people say that they were even able to do a fresh install just using Ozm. Thats already better than nothing.
