10.13. High Sierra mit Ozmosis

Beitrag von „nikoZ“ vom 12. Juni 2017, 00:30

Okey I will.

Seems like gpusensors did the problems. I think its due my new GTX 1060. I let only FakeSMC for tests.

Time for bed, i'll let you know tomorrow.

EDIT:

Managed to boot installer with this pack of sensors and fakesmc and all (actually i removed all the sensors and let only FakeSMC due to Pascal GPU sensors KP), but now i have Firmware error. Using imac 14,2 with BIOS `IM142.88Z.0118.B46.1705011513` and FF 3909612855 and FFM 4280287039. What should I do?
