Zitat von Fredde2209

No it doesn't and this will be very difficult to solve. I've wanted to try that with one user some time ago but he didn't reply after a certain time. But we can try if you want. The problem is only, that we you can't use the usual kext patches like in Clover

List	Of Parishes
Enab	le TRM for SSD
Boot	graphics pilloh, 10.10.2/10.10.3
Boot	graphics glitch, 10.10.x/10.11.x (credit lisa/8080, cecelpawon)

(Picture from Clover Configurator)

So you need to do that differently and I have no idea but using HackrNVMeFamily.kext. But that must be updated with every version of macOS so you can't use it for 10.12.5 and 10.12.6 or so. Here comes the difficulty: When you have updated your system, you can't boot back into it using a NVME SSD, because this HackrNVMeFamily.kext is not up-to-date. So you need another drive on which you perform the update, update the HackrNVMeFamily.kext and clone it back to the NVME SSD. But if you have one: lets try!

BTW: Why didn't you just start in English? We are a capable of multiple languages here

The bios is fine on R4G.

but when i install Sierra it stock on Apple logo for a while then PC will reboot and repeat.
