Hilfe bei Installation Sony VAIO i3

Beitrag von „derHackfan“ vom 19. Juli 2017, 20:33

Schau dir mal die Anleitung an, ist aber nicht auf meinen Mist gewachsen und bei Erfolg braucht es keinen Dank. 😄

App Store Update

At the time that I wrote this post I didn't opened the App Store, a few days ago I opened and when I tried to log on I've got the message "Your device or computer could not be verified" So I searched and it seems that you need a working Ethernet device in order to use App Store, I found that RehabMan developed a Null Ethernet Network Driver for people like us that don't have an Ethernet port <https://github.com/RehabMan/OS-X-Null-Ethernet>

Steps to get App Store working

- 1) Install NullEthernet.kext
- 2) Download ssdt-rmne.aml from the same package, rename it to ssdt-2.aml and place it on /Extra (if you have more ssdt's rename to the highest number + 1)
- 3) Go to System Preferences > Network and remove every network interface
- 4) Remove the file /Library/Preferences/SystemConfiguration/NetworkInterfaces.plist, you can execute `sudo rm /Library/Preferences/SystemConfiguration/NetworkInterfaces.plist`
- 5) Reboot
- 6) Go to System Preferences > Network and add the new Ethernet interface (from Rehabman's Null Ethernet Driver)
- 7) Add any other network interfaces that you need
- 8) Verify that the ethernet is the en0 device, for this task type `ifconfig` in a Terminal window and you should see something like this

```
en0: flags=0x4000<BROADCAST,MULTICAST> mtu=1500
    ether 00:00:00:00:00:00
```

```
inet 192.168.1.100 netmask 0xffff0000 broadcast 192.168.1.255
    bcast 192.168.1.255 netmask 0xffff0000
```

- 9) Launch App Store
