In EFI of the Installationstick we only use FakeSMC*.kext, USBInjectAll.kext and VoodooPS2Controller.kext and no DSDT.aml files.

Try this EFI-folder in attachment.

It give me the same error, please help me 😞

Your EFI folder contains two config.plist files, one inside CLOVER folder and one outside CLOVER folder

can tell me which one should I use?

UPDATE:

I tried using both config.plist files and the two not working and give me the same error 😞
