Lenovo E560 - Clover - EL Capitan

Beitrag von „Fleshboy55“ vom 7. September 2017, 09:36

Hello everyone, I ask you to help someone who came across or knows how to fix the shutdown of the laptop E560. When you click on the shutdown, it restart. I had to press the shutdown button every time to turn off. All work fine, but not shutdown. In clover fix and halt enabler not work. In the [BIOS settings](#), I tried all the items. I'm sure that the problem is in DSDT.aml. Help

friends 🙏🙏🙏.
