High Sierra error verifying firmware

Beitrag von „nrchandar0100“ vom 3. Oktober 2017, 11:35

Hi,

I want to edit ozmosis default plist using mm tool i can extract uncompressed and when i try to open with plist edit pro it does not how to do it? Secondly when i open ozmosis defaults with text edit i can see disable nvidia the value is true, if i use nvidia graphic card can i change it to false value to enable nvidia 210 card will it work. Please guide me.

Thanks and regards
