Ozmosis modified rom

Beitrag von „griven“ vom 18. Oktober 2017, 12:15

Please have in mind that everytime you flash a new ROM all [Bios settings](#) are lost and have to be adjusted again. Make sure your HDD mode is set to AHCI, Vt-D, if available, is turned off and Graphics is selected properly also make sure that you might need to create an own defaults.plist to configure OZ to fit your needs (eg PlattformID for iGPU or DisabaleNvidialInjection set to false for some NVIDIA Cards)...
