Hilfe bei Install: X299 | i7-7820X | GTX1080 -> Sierra 10.12.

Beitrag von „DanyH83“ vom 23. Oktober 2017, 21:30

I did it!! osx starts !!

just that every time on clover menu:

1)I have to flag (-v set on clover configuration) if i don't set the VERBOSE i got a prohibition screen after the apple white logo. (SOLVED)

2) on options and add the use nvidia web driver. How can i auto add the nvidia web driver flag? (SOLVED)

3)NO AUDIO-- no device found (your config.plist is set to id 11 using appleHDA)

NO WIFI

.what else did the Realtek ALC1220 and the WI-FI manage to do?
