Kein Audio nach Sleep Alc1150 Sierra

Beitrag von „griven“ vom 20. Dezember 2017, 00:30

In case of defaults.plist its a pretty simple task. All you have to do is to replace...

- SystemSerial -> Serial Number (in CloverConfigurator) -> Type String so replace as is
- BaseBoardSerial -> Board Serial Number (in CloverConfigurator) -> Type String so replace as is
- BiosDate -> [Bios Release Date](#) (in CloverConfigurator) -> Type String so replace as is
- BiosVersion -> Bios Version (in CloverConfigurator) -> Type String so replace as is
- FirmwareFeatures -> Firmware Feature (in CloverConfigurator) -> Type Integer so convert CloverConfigurator HEX Value to integer
- FirmwareFeaturesMask -> Firmware Feature Mask (in CloverConfigurator) -> Type Integer so convert CloverConfigurator HEX Value to integer
- HardwareSignature -> SmUUID (in CloverConfigurator) -> Type String use UUIDGEN in Terminal
- HardwareAddress -> Type String -> use Your Ethernet Nic Mac Adress seperated by ":"

That's it you're good to go. Speaking about DSDT stuff we really need to take a look at your current DSDT to determine and apply the needed patches...
