asus h81m-plus ozmosisi boot abfs

Beitrag von „mosca3“ vom 6. Januar 2018, 16:59

Hello then the apfs file is in the rom but since it did not start I tried to put it also in the folders of the efi partition (not knowing what to do anymore) the themes I use is qustohttps://www.hackintosh-forum.de/index.php / Attachment / 55691-HackintoshForumTheme-zip / because lighter.

I also tried using the shell to add bcfg driver add fsX: or blkX: \ efi \ oz apfs.afi but it does not work.

or I have ozmosis.ffs or something else in the bios or the default.plist not right in the bios or I would not know.

thank you
