Mac Pro 2009 upgrade

Beitrag von „igorjos“ vom 7. Januar 2018, 19:22

I posted back to shop bought SM961 because it was working only like external hard drive. But I need ssd for booting OSX so now I looking for Samsung SM951 AHCI version it should work without any kexts and other stuff (natively)

When I was testing SM961 on Mac Pro the read and write speed was about 1450 and it is not going to be higher on SM951. After I buy ssd I will post benchmarks
