Erledigt Hp 8470p Fixes!

Beitrag von „pole" vom 15. Januar 2018, 21:24

Hello anonymous writer,

Thanks for you reply!

I have only two mistakes as I said and the 7570m dgpu is working fine about 95%.
I got similar benchmark value under Cinebench Open gl test like in Windows.(~25fps)
In Geekbench I got half as point like in windows.
So,
My problem is the config file, I need help in this.
Plus, my cpu isn't got the Turbo Boost.
I think, because of the config.plist.(disable something or whatever)

I attached files in first post.

Thank you!
