Erledigt Hp 8470p Fixes!

Beitrag von „pole" vom 22. Januar 2018, 10:11

i followed the instructions, but all I got is the brightness key it doesn't work and i get a fix bright.
(restored the "original" status)
Rehabman told it hundreds of times, he has only device with Integrated Gpu, so mostly of his instruction is only informative,i think so.
Or i have spoiled something again.
Thank you for your persistent help.

Btw: How it worked on the 8460p? (What was the solution? I still think there are wrong values in my dsdt.)
