## **Neue Themes / Ozmosis GUI / BootMenü / UserInterface**

**Beitrag von „Pelikan213“ vom 31. Januar 2018, 22:33**

I tried)))

you was right

when CSM support - disable,- theme looks great!

But I have the same red screen in mac os ...

1,2 screenshots - theme great but mac os pink-red

3d screenshot - CSM support - always, theme over-scale, but mac os looking ok( no red screen)

and that's what I noticed

when CSM support - always , - apple boot logo looks overscaled too, and after few seconds ( 40-50 loading percent) my display blink and than I see clean small logo

it seems like resolution go to normal 1920 only on half mac os booting...

sorry I noob and don't know how to explain clearly ...
