

Kurz und Knackig: AMD RX Grafikkarten in macOS Installieren

Beitrag von „Harper Lewis“ vom 28. Februar 2018, 11:04

Und nicht vergessen:

Zitat

Side note: The patch is supposed to be done in the cache. If you patch an Info.plist to allow the loading of a kext, then it is not yet present in the cache. You will need to reboot twice. First with the key NoCaches to allow FSIject to load the kext and a second time for the cache to be patched successfully.
