Will Only Boot when I target thru the Bios

Beitrag von „ssprod“ vom 7. März 2018, 23:52

Zitat von Si Vis Pacem

High Sierra on SSD equates to APFS in almost all cases.

To display an APFS macOS Partition in the Ozmosis GUI you need to enter EDK-Shell and add it.

The Ozmosis bios you are using has the APFS-efi integrated and thus the macOS partition gets recognized and is selectable.

I installed H.Sierra via GUID, not APFS. Is this why this bios is not allowing OSX to boot automatically? I can boot, but only thru bios-target-High Sierra. Thanks.
