

In Arbeit Xiaomi Air 12,5" | M3-7Y30 | 4GB RAM | HD 615 | SSD 128GB

Beitrag von „influenist“ vom 13. März 2018, 14:00

Hi [@BlackOSX](#), [@nabster](#)

Thanks for the EFI. Sadly I was not able to use any of the files. Seems I got lucky and pasted a part of nabsters EFI and was able to install the system. Maybe the 256GB has different build?

Anyway:

- System boots (see EFI attached)
- GFX flickering on login background and sites (see screen)
- F2 - F3 - F3 works, but sound card is not working
- Bluetooth device being recognised on USB (normal?)

Not working:

- No sound
- No trackpad
- No F4 - F5 backlight

Loaded the following Voodoo, but it seems it does not make it my trackpad work:

```
$ kextstat |grep Voodoo
```

```
38 1 0xffffffff7f833c3000 0x6000 0x6000 com.alexandred.VoodooI2CServices (1) D202FBB1-6171-37C3-8357-7C6AAC1924E5 <4 3>
```

```
61 1 0xffffffff7f834f6000 0xd000 0xd000 org.coolstar.VoodooGPIO (1.1) 1848B000-F4BD-3C94-9D85-5066C11AC01C <11 5 4 3>
```

```
70 0 0xffffffff7f83503000 0x26000 0x26000 com.alexandred.VoodooI2C (2.0.1) 8B29CFE9-B216-3D0D-A002-4068D1CBB8BF <61 57 38 12 11 5 4 3 1>
```

According to <https://github.com/alexandred/VoodooI2C/issues/26> we should use MacForce fork: <https://github.com/MacForceOne/VoodooI2C/tree/patch-1>

Please advice on the trackpad and sound for now (-:

Many thanks in advance.
