high sierra 10.13.3 and ozmosis

Beitrag von „al6042“ vom 14. März 2018, 21:03

Hi,

since you know that your setup works with Clover, why should you try to fumble around with Ozmosis at all?

One of the biggest issues with Ozmosis containing the apfs.efi and an APFS-formatted SSD is the problem, that the boot partition might not be found from the Ozmosis bootloader... Just like your description said...
