iMac Pro Xeon Build

Beitrag von „turboyoda“ vom 30. März 2018, 17:31

Edit by derHackfan: Bitte keine Vollzitate in Vollziten verwenden.

EFI that I uploaded has everything for the locked BIOS, so you can try it and let us know if it worked.

You can find steps for unlocking ASUS BIOS (X299 platform) on other forums (maybe there is a thread even here).

As for the VEGA, I haven't worked yet on this build, so I don't know about performance of the GPU. I'm currently downloading 10.13.4 and if the GPU is quiet I will then go forward into more testing and production with this Xeon build.
