Kein Sleep / DSDT Patch ? / Wake reason: PXSX EH01 (Network)

Beitrag von „SirusX“ vom 1. Mai 2018, 11:04

Hab das so nicht gefunden bin ich blind 🤔👉 Finde es im Wiki nicht habe es aber jetzt dank des Textes was du kopiert hast über Google gefunden teste es gleich mal.

hier der Patch leuchtet ein

```
#Maintained by: RehabMan for: Laptop Patches
#graphics_PNLf.txt
```

```
# This patch enables the brightness slider in SysPrefs->Displays
# and will also enable activation of sleep mode by closing
# the laptop lid.
```

```
# This patch is a "basic" PNLf patch and doesn't attempt
# to fix various common problems with the backlight control.
#
# For advanced patches, see:
# graphics_PNLf_ivy_sandy.txt
# graphics_PNLf_haswell.txt
#
```

```
into_all device label PNLf remove_entry;
into definitionblock code_regex . insert
begin
Scope (_SB)\n
{\n
Device (PNLf)\n
{\n
Name (_ADR, Zero)\n
Name (_HID, EisaId ("APP0002"))\n
```

```
Name (_CID, "backlight")\n
Name (_UID, 10)\n
Name (_STA, 0x0B)\n
}\n
}\n
end;
```

to avoid conflict with root scope PNLF

```
into_all method code_regex Store\s+\(PNLF,\s+(.*)\) replaceall_matched begin Store(\\PNLF,
%1) end;
```

EDIT:

Sleep läuft nun beim zuklappen danke für den Tip
