Hybriden Standby funktioniert nicht zusammen mit der Pownap Option

Beitrag von „anonymous_writer“ vom 9. Mai 2018, 20:09

Auch der geht problemlos. Auch nach Neustart.

A screenshot of a macOS terminal window. The window title is "michael [redacted] -bash". The prompt is "MichaelwerMac04:- michael [redacted]". The command "pmset -g" has been entered, and the output shows system-wide power settings. The settings are as follows:

```
System-wide power settings:
Currently in use:
standby 1
Sleep On Power Button 1
womp 1
autorestart 0
hibernatefile /var/vm/sleepimage
pownap 1
networkoversleep 0
disksleep 10
sleep 60 (sleep prevented by AddressBookSourceSync)
autopoweroffdelay 28800
hibernatemode 3
autopoweroff 0
ttyskeepawake 1
displaysleep 10
standbydelay 4200
```

The prompt is now "MichaelwerMac04:- michael [redacted]".
