Erledigt Does Oz understand Xeon CPU's and how to make it work?

Beitrag von „griven" vom 12. Mai 2018, 11:32

After flash and before anything else press ESC Key several times to disable OZ (Screen turns red) after the screen turned red enter bios (hit del directly after the screen turned red) and adjust your settings (disable IGPU, Set Primary Screen to NVIDIA, Select "other os" and so on) and save them. Restart and let OZ do it's thing.
