WOL works now. What I did:

1. Installed AppleIntelE1000, didn't work, reinstalled IntelMausiEthernet. WOL didn't work.

2. Installed latest FakeSMC sensors and went through [BIOS settings](). Turned on Intel Rapid Start and checked in Network Adapter that WOL is turned on there also. WOL worked but no sensors in HW Monitor.

3. Reinstalled old Sensors and rebooted. WOL still works

4. Turned off Intel Rapid start in BIOS. WOL still works!

So, I have exactly the same setup as before but WOL is working. I have no idea why. 😡

Best regards,
Goran
